

**IN THE SPECIFICATION**

Please amend the Specification as follows:

On page 6, lines 3-12:

In other words, if the phase relationship among the reproducing heads A11 and A12 and the recorded track TkA shown in FIG. 12 changes as one of the heads A11 and A12 moves either to the left or right, respectively, then the head having moved ~~nears~~ near the center of the track TkA, and that head having neared the center provides a more satisfactory reproduced signal, to improve the reproduction quality.
